I. Kallnenko, V. O.
II. Mefedova, N. A.Trans. from Mikrobiologiya (USSR) [1956] v. 25, no. 2
[p. 191-194].DESCRIPTORS: *Bacteria, Aquatic animals, *Ships,
*Fouling, Antifouling coatings, *Paints.

The problem of the correlation of bacteria and zooplankton organisms of fouling is explained by studying glass tinted with toxic paints and immersed in tanks of circulating water and in water of a sea harbor. All the paints used now as anti-corrosive and anti-biological coatings are not toxic for marine bacteria. In the first 24 hours microorganisms fastened to the painted surface, intensively multiply on it and cover the paint with (Biological Sciences--Microbiology, TT, v. 8, no. 6)
